

**Empowering parents with the truth to help our children heal.**

# GENERATION RESCUE

Generation Rescue is a parent-founded, parent-funded, and parent-led organization focused on biomedical treatment for autism. Since our founding in 2005, our volunteer families, more than 400 strong, have helped over 15,000 children begin biomedical treatment.

Our children are experiencing epidemics of ADD/ADHD, Asperger's, PDD-NOS, and Autism. We believe these neurological disorders ("NDs") are environmental illnesses caused by an overload of heavy metals, live viruses, and bacteria. Proper treatment of our children, known as "biomedical intervention," is leading to recovery for thousands. The cause of this epidemic of NDs is extremely controversial. We believe the primary causes include the tripling of vaccines given to children in the last 15 years (mercury, aluminum and live viruses); maternal toxic load and prenatal vaccines; heavy metals like mercury in our air, water, and food; and the overuse of antibiotics.

*"I have just spent 4 hours on your website. Thank you for compiling all this useful information in one place. There is much work ahead of us to help our son, so we will get started now. Just wanted to let you know that you were the catalyst...very well done website."*

Because of the inherent conflict mainstream health authorities have in confronting autism, parents are left to fend for themselves, prompting the need for organizations like Generation Rescue to be created. Despite hundreds of parental reports of recovery and thousands of parental reports of improvement, biomedical intervention is not receiving the attention of mainstream health authorities. Today, we think all resources should be devoted to finding the best possible biomedical treatments to help as many children as possible recover.

**Autism is preventable and reversible.**

(Evidence when administered within the first 18 months of life)

**Autism is preventable and reversible.**

Autism is a 100% preventable and reversible condition. It is caused by toxic metals and live viruses. The only effective treatment is biomedical intervention. It is a 100% preventable and reversible condition. It is caused by toxic metals and live viruses. The only effective treatment is biomedical intervention. # GENERATION RESCUE

*"First of all, I'd like to thank you from the bottom of my heart — you helped us save our daughter. I found your website Feb 2005 could not stop reading it and all the links ALL NIGHT. We found a good ND locally who follows DAN protocols and we began biomed intervention on our daughter's fifth birthday. She "woke up" with the biomed treatments, started to talk in sentences, became an inquisitive and happy child, with a sense of humour, and as far as we are concerned, is now recovered. Her IQ has gone from mid-50's to 100 between both the ABA and biomedical interventions. She will be turning 8 this spring."*

## FACTS

Autism now impacts 1 in 150 children, up from 1 in 10,000 in the 1970s. That is an increase of 6,000%.

1 in 150 children have autism. 1 in 12 children have ADHD. 1 in 6 children have a learning disorder.

Autism is an environmental illness caused by an overload of toxic metals, bacteria, viruses, and chronic inflammation.

Many children with autism share the same physical symptoms including gastrointestinal distress, food allergies, immune issues, vitamin and mineral deficiencies, and sleep disturbances.

In the 1980s, the recommended vaccine schedule was 10 shots by age 6. Today, it is 36 shots.

The U.S. gives more vaccines at an earlier age than any country in the world.

Children with autism test for higher amounts of toxic metals in their system than their neurotypical peers.

Typically, doctors do not tell parents about biomedical treatment. They find out about it from other parents and the web.

There are more than 400 doctors in the US dedicated to treating children with autism biomedically.

Biomedical treatment consists of diet changes and vitamin, mineral and other supplementation.

Vaccines are not mandatory for school. It is a parent's choice to decide what and when to vaccinate.
